Trabectome® Glaucoma Surgery

Trabectome is an FDA-cleared anterior segment surgical device for minimally invasive treatment of glaucoma. In a procedure as simple as cataract extraction, Trabectome safely removes Trabecular meshwork and inner wall of Schlemm's canal using a bi-polar electro-surgical needle thereby re-establishing access to the eye's natural drainage pathways.

Unparalleled Safety, Maximum Effectiveness.

- 33% IOP Reduction (24 mmHg to 16 mmHg)
- 67% Medication Reduction (3 meds to 1 med)
- Synergistic and Complimentary to Cataract Surgery

** at 72 months from baseline*
